

DRUG-CARRIER COMPLEXES  
AND METHODS OF USE THEREOF

ABSTRACT OF THE DISCLOSURE

Drug-carrier complexes, drug carriers, pharmaceutical formulations, methods of  
5 delivery drugs to an organism or tissue culture, methods of increasing the solubility of a  
substance, targeted carriers, drug delivery systems and implants are described. The  
compositions and methods of the invention include forming complexes having  
reversible associations between nucleotides and drugs. The compositions and methods  
of the invention can be employed to target drugs to cells, organisms or combinations of  
10 cells to treat and to study the underlying mechanisms of diseases, and to test drug  
candidates.
